mistero a villa milaflora

boring, its like old school phone game

don't go for it. This game is really hard if you are not familiar with the habits of gopniks. If you understand their motive and why they playing such hardbass music wearing adidas u find yourself perfectly in place with this one.

10/10 would lenin again!. not good not bad

. Interesting story line. Puzzles are challenging. Very entertaining overall and the extra unlockable mini story is an added bonus..

These items are great in a pinch but I try to finish battles as quick as possible, these items are great for beginning adventurers!. it says here The Crew Season Pass is on my steam library but i dont have it there, how can i get this working since i already pay for it?. Instant Dungeon is a crossing between rogue-like and platform with random generated levels.

It's the kind of game easy to learn hard to master, and it gives u that feeling "Try it one more time", because u know why u died and how to fix it

The pros:

It's fun, addictive, is as hard as u want it to be.. later levels will show U if u think u are good:)

The cons:

At some point u want more.. because u like it, Is this really a bad thing? Well yes because i wold like my character to advance in some other way then a consumable item from the ground

In conclusion i had fun with this game once i could run it :)

If u are into platformers and "death/ try" again games this could be your launch break getaway.

As a final point... if u play this game on a laptop make sure the game uses the dedicated card and not the integrated one.. or will not work.

Update:

As in 05.12.2014 the game updated, works on my pc's and on the laptop. I will play it and write my impressions. What i can say for now is that these guys care about their product and worked to fix it.

Old stuff:

This game does not start, i get a loading screen and then the app crashes.

I can't review a game that does not start in any other way then a negative way.

PS: i have tried it on 2 pc's and a laptop.

I will follow up this review as soon as the game is playable.

Love it! Tons of costumes.. One of those throw things at things angry birds style physics games except this one perhaps is a bit more puzzle-like and requires a bit more planning about how your shots will ricochet off things. The game is also really really nice looking and I can recommend it over other birdslikes just based on the amount of style it exudes.. This wave-based shooter is more fun and immersive than I expected. The demo was great - at the time - but in the months since the demo went live, it seems \*everything\* is coming up zombies in the VR world.

Still, the gun action feels good, and the re-tuned waves are more exciting and hectic now. I'm getting some good play value out of it, and looking forward to the later levels.

You definitely want to play this one alone in a room with headphones on. Some good scare moments, and memorable atmosphere.. Absolutely horrible game, but very fun to play.

13/10 Kebab. No just dont. Get any other farming simulator.. SOOOOOOOOOO cool. This "tech demo" as it is right now has a unique freedom of movement. i love the wings and suggest adding wing suit alternative costume or maybe a pair of lazer blue jet airplane wings, maybe some rings to fly through for trick flying games. Obvoiusly if dogfighting multiplayer rooms were added some day this game could make some real cash. Totaly still in development dont expect a goal or score yet but it is liberating to rocket to the top of the map then use the wings to glide down and land like a bird. MUST TRY. --support this dev!--. I'd like to start by mentioning that this actually a really good game. Yes, it has a few bugs here and there but at least it is still playable. For such a reasonable price, this is a good game. Remember, it came out in 2009 so we can't expect anything special. But for 2009, it actually has quite good graphics. The PATH route is quite a nice length, not too long and not too short. You can get a shift over, within about half an hour. The graphics inside the tunnels are excellent, especially the dynamic lighting that lights up the cab as you drive along. Above ground, the graphics aren't all that, but I really like the detail on the track and the signals are very bright which means you can see them from a long way off. When driving east above ground you can also see the Manhattan skyline, which I find a very nice touch to the game. In stations, you can enter free roam mode which allows you to explore. However, there is a very annoying platform bug which means that if you accidentally walk off the edge of a platform, it is impossible for you to get back up again. Therefore, you have no choice but to end the mission and start all over again. The people on the platform are static but for a 2009 game, we can't really complain. There are about three trains that you can choose from, but they all seem to be exactly the same inside the cab, so it doesn't really make any difference. Something that can be really annoying when driving is that you have to control the announcements manually by pressing keys. This can get quite boring. The station graphics could be a touch better but they are not too bad either. Another thing, is that you have to manually configure all the keys before you drive. There is no tutorial, so I guess you are just expected to learn yourself. The speed limits in the game are also very harsh. They can just change at any time. You could be just driving along at 40mph and then you notice that the limit has changed to 15mph, with a tight curve approaching. A major disappointment was that there is no speedometer inside the cab. You have to totally rely on the route monitor screen. Tight curves can also derail the train, if you are not paying attention to the speed restrictions. There are AI trains in the game, but you can only see them when you are above ground, and not in underground stations.

Overall, I rate this game 7.5/10. It has some very nice features and but also some really annoying bugs. But for such a cheap price, I'd say it is worth buying and it doesn't require a high spec pc to run either, although I strongly recommend you check the minimum requirements first, just in case.. Our usual JackBox team got together to try out Awkward thinking it would be something along the same lines.

Super. Boring.

It suffers from the same problems as some of the JackBox games do, it tries too hard to be funny without leaving any room for the player to be funny. We were hoping that the different game modes (based on the number of people playing the game) would help mix things up a little, but they all just variations on the same 50/50 guess. Ho hum.. This game is not finished. Framerate goes from 79fps down to 3-5fps about every 5 seconds. the content may be offically complete but there is more work needed on this game.
